

BEE PRODUCTS

Most flowering plants require bees for pollination. Pollination is part of the way plants reproduce, making fruits and seeds that humans (and other animals) use for food. We need plants to help maintain our atmosphere, the air we breathe as well as our food and medicines. Without bees we are all in big trouble and the world is currently facing a crisis, with bee populations declining due to human-induced pollution, indiscriminant use of pesticides and the rise of diseases that have never been seen before.

ABOUT PROPOLIS

Propolis Toothpaste

For healthy gums, mouth and teeth

Propolis Antiseptic Cream

For wounds and cold sores

Propolis Tincture

To maintain healthy immune system and resistance to

Did you know that honey isn't the only thing that bees make? Bees also produce a compound called propolis from the sap on needle-leaved trees or evergreens. When they combine the sap with their own discharges and beeswax, they create a sticky, greenish-brown product used as a coating to build their hives. This is propolis.

Thousands of years ago, ancient civilizations used propolis for its medicinal properties. Greeks used it to treat abscesses. Assyrians put it on wounds and tumors to fight infection and help the healing process. Egyptians used it to embalm mummies.

The composition of propolis can vary depending on the location of the bees and what trees and flowers they have access to. For example, propolis from Europe won't have the same chemical makeup as propolis from Brazil. This can make it difficult for researchers to come to general conclusions about its health benefits.

However, it is known that Propolis is an effective anti-microbial and anti-cancer agent containing a number of compounds usually found in plants, including anti-oxidants that help support the immune system.

Ask us about our Wildcrafted Immune-Assist Propolis Tincture.
